REASON FOR ALLOWANCE

1. Choi discloses a track for a toy vehicle having a plurality of connectable segments each comprising an upper layer having a top side for supporting the toy vehicle and a bottom side, the upper layer having a forwardly projecting tongue, upwardly extending side walls comprising forwardly extending tongue and slot at opposite side thereof, a slot extending from the forwardly projecting tongue of the upper layer. Frauca and Hesse disclose various types of toy vehicle track comprising forwardly extending tongue including slots for receiving the pins of an adjacent track segment. Neuhierl discloses a flexible track segment comprising a pair of jaws with hook-forming, pointing to each other ends, which projects away from a front side of the track segment side, a linkage element on one side of the track segment and a receiving part on the opposite side. However, none of the references of record suggests a track for a toy vehicle comprising an upper layer and a lower layer spaced from an upper layer, wherein a pivot pin is vertically disposed on a forwardly projecting tongue attached to one of the upper and lower layers, and a rearwardly disposed crossbar adapted to receive the pivot pin of a rearwardly adjacent segment are provided in addition to forwardly projecting prongs for engaging a bottom side of a separate yet immediate forwardly adjacent segment in the manner defined in the instant claims 1, 14 and in combination with other limitations of the claims. Therefore, claims 2-13, 15-17, depending therefrom, are considered to be allowable.
